

Mevis and ZZ Tech Sign Agreement for Europe's First Joint Venture Dedicated to Battery Cell Structural Components

The partnership is based on sharing industrially proven know-how, processes, and technologies, aiming to provide the European market with specialized expertise while supporting the development of a local supply chain.

Involved sectors include electric mobility, energy storage, advanced digital infrastructure, and AI data centers.

Rosà (Vicenza, Italy) / Tongxiang (Zhejiang, China), September 15, 2026 - Mevis S.p.A. ("**Mevis**") and Zhejiang Zhongze Precision Technology Co. Ltd. ("**ZZ Tech**") announce the signing of the **Joint Venture Agreement (JVA)**, executed on August 31, 2026, establishing the **first Joint Venture (JV)** in **Europe dedicated to the production of precision structural components for battery cells** (cans and lids) serving Battery Electric Vehicle (**BEV**) and Battery Energy Storage System (**BESS**) applications.

The new company combines **Mevis' established European industrial footprint** with **ZZ Tech's advanced technological and manufacturing expertise developed** through years of collaboration with leading global battery manufacturers.

The JV introduces an innovative collaboration model based on the **sharing of industrially proven know-how, processes and technologies**. Its objective is **to provide the European market with highly specialized expertise** while **supporting the development of a local supply chain** capable of meeting growing demand from **electric mobility, energy storage**, advanced digital infrastructure and AI **data centers**.

As part of the agreement, the JV has already completed the selection and preparation of its manufacturing site in **Slovakia**, creating the conditions for the rapid installation of production technologies and an accelerated operational start-up. The facility will ensure **proximity to European customers**, high-quality standards and a more efficient and resilient supply chain.

An industrial, organizational and technological integration process between the two partners has already been initiated.

The signing of the JVA follows the strategic path announced by the two companies during Battery Show Europe 2026, held last June in Stuttgart.

Federico Visentin, CEO of Mevis: "Europe is building its own battery value chain, and we believe this transformation requires not only manufacturing capacity but, above all, access to the best expertise available worldwide. Through this Joint Venture, we are combining Mevis' industrial strength and

proximity to European customers with the technological know-how developed by ZZ Tech in one of the world's most advanced battery ecosystems. This initiative is not simply about establishing a new industrial operation; it is about creating a platform that can accelerate the development of capabilities, technologies and opportunities across the European value chain."

Samuel Wu, CEO of ZZ Tech: *"The signing of this agreement confirms our commitment to supporting the global growth of the battery industry. This is the second international Joint Venture established by ZZ Tech in recent months, following the partnership launched recently in Malaysia, and it represents a particularly important milestone in our European strategy. In Mevis we found a partner with a strong industrial reputation, deep market knowledge and a shared long-term vision. Together, we will bring advanced manufacturing and technological expertise to Europe, helping build a more competitive, resilient and customer-focused supply chain."*

About Mevis

Founded in 1961, Mevis is an industrial group specialized in the design and manufacture of precision metal components and assembled systems for the automotive and electrotechnical sectors.

As a Tier 1 supplier to leading OEMs, the Group operates an integrated manufacturing platform serving global customers in technologically advanced markets.

Mevis generates annual revenues of around €200 million.

About ZZ Tech

Founded in 2016, Zhejiang Zhongze Precision Technology Co. Ltd. (ZZ Tech) specializes in the development and production of precision structural components for battery cells (cans and lids) supplied to leading global battery manufacturers. The company has developed distinctive expertise in high-precision manufacturing processes required by next-generation battery cell technologies for automotive and energy storage applications.

ZZ Tech generates annual revenues of around €290 million.
